

Behmor Jake 2021 update:

Needless to say, 2020 was a challenge for everyone and the manufacturing industry certainly wasn't immune and still encountering issues on supply.

As world-wide supply chains dealt with all their issues, we decided to take a look at our existing design for Jake and take the opportunity to expand its capabilities and use in both the coffee roasting and chocolate making markets. To that end, we opted to expand the functionality of Jake to ensure that it could do as much as possible and help a broad number of craft makers. While the original Jake was designed for use as a dedicated coffee bean roaster, we realized that with some changes, others could use it as well. During our testing, we also found that a few other changes could be made that would be beneficial to all our friends. These included:

- Redesign of the loading system for greater efficiency in both coffee and cocoa loading
- Streamlining the control electronics to ensure even greater reliability and flexibility
- Reduced board density and components
- Reduced the number of mechanical components for longer term reliability
- Component lifetime extension through optimized design focused on greater protection from heat sources.
- Drum adjusted for better load removal and cocoa mixing
- Leg modification for stability and ease of assembly
- Optimized part tolerances for easier user maintenance and reduced production costs
- Added manual control over roasting as a standard option
- Ability to seamlessly switch between Artisan and manual Control

Suggested Price \$2495 USA Pricing/ 220V TBD

Release Date: Fall 2021 Behmor Jake V2.0

Details: [Jake Kilo Roaster – Behmor](#)
